

MEDICAL REPORT

Visit Info

Doctor's Name: Dr. XYZ (Oncology) **Visit Date:** 09.12.2025
Specialization: Neuro-Oncology

Patient Info

Full Name: Dilshad **Birth Date:** 14.08.1990
Med. Number: DL908723 **IHI:** 5566-9988-2211-4455
Phone: +91 98765-43210 **Email:** dilshad@mail.com

Assessment

Patient Dilshad presented with persistent headaches, visual disturbances, and episodes of dizziness. MRI scans reveal the presence of a tumor mass located in the left temporal region of the brain. The tumor appears encapsulated with moderate surrounding edema.

Vital signs are stable. No severe motor or speech impairment was observed at the time of examination.

Diagnosis

Radiological findings are consistent with a **Left Temporal Lobe Tumor**, likely a Low-Grade Glioma. Biopsy is recommended for confirmation and grading. No metastasis was observed in the preliminary scans.

Treatment Plan

1. MRI with contrast to further analyze tumor margins.
2. Stereotactic biopsy for histopathological confirmation.
3. Surgical evaluation for tumor excision depending on biopsy results.
4. Symptomatic treatment: anti-inflammatory medication and headache management.
5. Follow-up every 2 weeks to monitor changes.

Prescription

- Steroids (low dose) to reduce swelling.
- Analgesics for headache control.
- Avoid stress, maintain hydration, and monitor any sudden changes in vision or behavior.
